#### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election without traverse of claims 1-17 in the reply filed on 5/26/2005 is acknowledged. Claim 31 was inadvertently not mentioned in the prior restriction requirement; however, this claim, directed to block copolymer comprising water soluble blocks, is grouped with claims 18-30, directed to a process for making water soluble block copolymers.

### **Priority**

2. Applicants are requested to update the priority claim as set forth in the first sentence of the specification to include the patent number of the now-issued parent application.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Woodworth et al. (US 6,441,066).

Art Unit: 1713

The reference discloses a pigment dispersion comprising a dispersant which is a (co)polymer made using atom transfer radical polymerization (abstract; col. 4-6). ATRP is a controlled polymerization process comprising a transition metal complex, a polymeric initiator, and monomer. Although unexemplified, the reference suggests the use of azide group as the radically transferable group (col. 5, lines 17-25) and also the inclusion of both ionic monomer (both anionic and cationic) and non-ionic monomer (including polar monomers) (col. 11, lines 29-43 and col. 13, lines 37-54). Excess ligand is recommended at col. 5, lines 40-42. Use of water, other donating solvents. and mixtures thereof are disclosed at col. 5, lines 43-51. Although not specifically noted. one of ordinary skill in the art would immediately envisage ionic monomer in an amount of greater than 0.1% from the disclosure of "mixtures" and "combinations" of ionic and non-ionic monomers. One of ordinary skill in the art would be motivated to select these features because patentee has suggested them as useful embodiments in the process. of making a pigment dispersant. Claim 17 is included in this rejection because after the ATRP reaction of forms the first ionic monomer-containing segment, the "initiator" is still present as the initial structure further comprising ionic monomer-based moieties between the residue and the active site.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roberto Rábago whose telephone number is (571) 272-1109. The examiner can normally be reached on Monday - Friday from 8:00 - 4:00.
